

BuildKite: In *My* Pubapps instance?

M. Cuffaro

Expectations

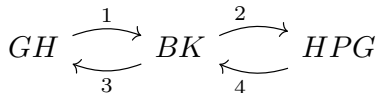

1. Recap Buildkite
2. See a completed build
3. Give an overview with changes to our Buildkite set-up

Recap!

We learned:

- ▶ How YAML pipelines define workflows
- ▶ How Buildkite delegates work to HPG
- ▶ How we can use this to process our docs and tests faster

Recap!

1. On push/PR, a GH **webhook** triggers **agent** to download repo
2. Repo contains **pipeline.yml** which instructs agent to execute `jobscript.sh`, passing docs/test execution to HPG
3. HPG runs test/docs code, passing data back to BK agent.
4. If branch is `main`, BK will deploy the docs.

But...

Updates

- ▶ `.buildkite` functionality is merged into `AlgebraicTemplate.jl`.
- ▶ To support a service account, we are migrating to PubApps
